

6-24-88

Dr. Michel Nanny
3640 East Cathedral Rock Drive
Phoenix, Arizona 85044

Dear Michel,

Excuse the pen, but I had to drop you a note. Everything is going great with AGE. The Etchout Problem Solving Team is wrapping up the case study and a 53% reduction in etchouts has occurred. Bill Kluck and Paul Thompson finish the last surface experiment on 6-23-88 and the results of that should be available the week of 7-4-88. I enclosed copies of a couple of reports the team published in June. Our next action plan for Spurious foil is being kicked off the week of 7-4-88. Moral is high and Bob and the staff are showing commitment and sponsorship to the program. Over the month of June, I have been helping one of our vendors do a Multi Vari analysis. It has been very rewarding to me to be able to step right in and do this. I am also enclosing the results of a study Bill Kluck did on Copper Plating distribution in F6 inner layers. Bill is turning out to be a successful Green belt and a great resource for the office. Feedback was positive from the seven Green Belts that attended the Experimental Design class in Salt Lake City. They said the

training was very intense.

In closing, I would like to thank you for the time you spent with me over the past 8 months. I feel what I have learned from you will help me the rest of my career. If Research Dynamics ever needs a new employee, please feel free to contact me.

Sincerely,
Michael J. Banzel
Manager Statistical Process Control
and Customer Services.

P.S. I hope you like my new title.
